BEYOND THE SCORE

Case 2 · Trace Sheet

Design apparatus for BTS_Case2_Reading

1 · CASE POSITION (HISTORICAL DESIGN)

Pilot 1, Case 2 of 4. Keying (as designed): Pākehā intergenerational household, Palmerston North, formerly owned outright and remortgaged. Scenario: flood insurance withdrawal and overdraft denial via open banking. Trigger events: insurance discontinuation letter; automated overdraft decline. Household: Callum (18), Melanie (47), Graham (74). Actor: institutional — climate-risk mapping and predictive credit scoring reaching the household through a letter and an app decision; single-scene exposure. Lead card: the member the system addressed (Callum). The open-banking mechanics modelled here were prospective at the time of the pilot; major-bank data-holder designation under the Customer and Product Data framework commenced 1 December 2025.

2 · CORPUS ANCHORS

Callum: open-banking consent and predictive scoring distrust — Financial Markets Authority & Reserve Bank of New Zealand (2018); Ministry of Business, Innovation and Employment (2025); Financial Markets Authority (2024). Low emotional fluency, youth wellbeing — Fleming et al. (2020). Family tech-support role — Correa (2014). Media habits — Myllylahti & Treadwell (2023).

Melanie: financial vigilance, sandwich-generation load, gendered financial burden — Superu (2015); Te Ara Ahunga Ora Retirement Commission (2021); Financial Markets Authority (2024). Institutional fatigue — Financial Markets Authority & Reserve Bank of New Zealand (2018). Paper-based control preference: attribute constructed at design; no corpus source measures preference (post-pilot audit).

Graham: post-war homeownership cohort, asset fragility — Statistics New Zealand (2020a, pp. 27–44); Te Ara Ahunga Ora Retirement Commission (2021). Insurance and institutional betrayal register — Insurance Council of New Zealand (2023); Financial Markets Authority (2024). Low digital confidence, high institutional memory: attributes constructed at design; Grimes & White (2019) measures access, not confidence (post-pilot audit). Climate-hazard awareness gap, publicly identified and scheduled for response — Ministry for the Environment (2022, Table of actions, action C1/3.4).

Scene: multigenerational household by economic necessity — Statistics New Zealand (2020a, pp. 124–129); Superu (2015).

4 · LOG

References converted from Chicago author-date to APA 7. Hedged persona attributions remain in the source document; snapshots keep the composite's stated content.

Post-pilot source audit. Paper-based control preference, low digital confidence, and high institutional memory are marked constructed: Grimes & White measures access rather than preference or confidence, and Graham's profile (mortgaged urban owner-occupier, 66–75 band) sits in higher-access groups in that study's Tables 13, 16, and 17. The climate anchor is re-worded to the awareness gap the National Adaptation Plan

itself records and schedules for response. Statistics New Zealand (2018a) is retired; scene and asset anchors re-point to Housing in Aotearoa: 2020 with locators. A prospective-mechanics note is added to the case position.
