BEYOND THE SCORE

Case 3 · Trace Sheet

Design apparatus for BTS_Case3_Reading

1 · CASE POSITION (HISTORICAL DESIGN)

Pilot 1, Case 3 of 4. Keying (as designed): Chinese-Malaysian intergenerational household, East Auckland, three-bedroom rental. Scenario: income-irregularity flag on a youth banking application; migrant family algorithmic exclusion. Trigger event: feature lockout citing ‘irregular household income patterns.’ Household: Aanya (17), Mei-Lin (46), Popo Jiahui (77); the father is an unvoiced presence working deliveries. Actor: institutional — automated risk profiling reaching the household through an app's withheld features; single-scene exposure. Lead card: the member the system addressed (Aanya). The open-banking mechanics modelled here were prospective at the time of the pilot; major-bank data-holder designation under the Customer and Product Data framework commenced 1 December 2025.

2 · CORPUS ANCHORS

Aanya: filial expectation and internalised tension — Wang (2019); Ip (2003); Ran & Liu (2023); Peiris-John et al. (2025). Model-minority pattern and youth mental health — Asian Family Services (2021); Fleming et al. (2020); Peiris-John et al. (2025). Consent without full understanding: attribute constructed at design; no corpus source addresses consent comprehension (post-pilot audit). School-mediated digital access — King-Finau et al. (2021); authorisation persistence, twelve-month re-notification requirement — Ministry of Business, Innovation and Employment (2025). Algorithmic exposure of mixed income — Financial Markets Authority & Reserve Bank of New Zealand (2018); Financial Markets Authority (2024).

Mei-Lin: migrant financial conservatism and privacy — Wang (2019); Asian Family Services & Trace Research (2025); Financial Markets Authority (2024). Mother-translator load across generations — Superu (2015); Ran & Liu (2023). Language and institutional barriers — Hua (2021, November; mechanism evidenced among former refugees and marginalised migrants with English as a second language; transfer to this household is interpretive, post-pilot audit).

Popo: older Chinese immigrant dignity, restraint, privacy — Yeung & Allen (2020); Wang (2019); Asian Family Services (2021); Asian Family Services & Trace Research (2025). Elder anchor role, intergenerational dissonance expressed through care — Superu (2015); Ran & Liu (2023).

Scene: multilingual household structure and base rates — Statistics New Zealand (2020a, pp. 124–129, Figure 105; 2021a); Superu (2015); Grimes & White (2019, Table 11).

References converted from Chicago author-date to APA 7. Hedged persona attributions remain in the source document.

Post-pilot source audit. Consent-without-full-understanding is marked constructed: no corpus source addresses consent comprehension; the framework's twelve-month re-authorisation notice is recorded as the adjacent institutional fact. Hua's population warrant is stated in the anchor. Asian Family Services (2021) and Asian Family Services & Trace Research (2025) are successive reports in one survey series; both are now cited plainly. Grimes & White records Asian New Zealanders with the highest internet access of any ethnicity; the scene anchor supports household structure and base rates, not digital exclusion. Statistics New Zealand (2018a) is retired; the scene anchor re-points to Housing in Aotearoa: 2020, Figure 105. A prospective-mechanics note is added to the case position.
